- * Fecal Score: _____
Chart: bit.ly/SOL-stoolchart
- * Stool Color: _____
- * Straining
- * Diarrhea
- * Bloody
- * Mucusy
- * Runny

Urinary:

- * **Blood in urine**
- * Frequent urination
- * **Strained urination**
- * Inappropriate Urinating
Where: _____
- * Other: _____

Red Items = Call Carrie **Green Items = Medical Chat - ask again if no response >4 hours.**
Black Items = Medical Chat - ask again if no response >8 hours.

PROFILES:

A basic profile for each animal must be submitted within **5 days** of intake. Required info: Name, Intake Date & Place, Birthday, Gender, Breed, Coloring. Choose “Not Yet” for the ready to enter details question and “No, done for now” for the vetting question. Use the correct Mentor email when entering the info. All animals with the same birthday can go on one form. This form is the base that will be used later to create the animal’s PetSmart and online adoption profile. A copy of your answers will be sent to you. **Please ensure you receive and save the email.**

MEDICATIONS: (Daily, Other)

Digestive / Vitamins: Each day, the animal should be provided a pinch of **probiotics**, a scoop of **lysine** and a dose of **Pet-Tinic** on their food. This does not need to be tracked.

Other Medications: Must be approved by leadership prior to administration. Add to table on Medical Tracking form.

DEWORMING: (Procedure change as of 2/1/2022 - please review document)

Every animal must be properly dewormed (see [Deworming reference guide](#)) prior to adoption or placement in PetSmart. Note medications given in the labeled spaces on the Medical Tracking form. Pyrantel and Toltrazuril for kittens (animals less than 6mo or 6lbs) or Panacur only for all other cats.

EAR CLEANING AND MITES:

We often have animals who come in with ear mites. Because it is so common, we treat every animal with either coconut oil (under 12 weeks old) or a medicated treatment (over 12 weeks). Instructions for how to clean and treat their ears based on their age are in our [Ear Cleaning document](#). Record on the Medical Tracking form.

CORE VACCINATIONS: **Cats:** FVRCP **Dogs:** DHPP

Vaccines are given at clinic or by designated individual (listed on [Who to Contact](#)).

Check Intake paper work (if any) to verify dates that any vaccines were given prior to intake and note them and the ones given while with you on the Medical Tracking Form. You can put the vaccine stickers on the form, too, if they're given to you. **If the time between 2 vaccines exceeds 28 days, the series needs to be restarted.** It's helpful to write the due date of the next vaccine in pencil in the circle.

UNDER 4 months at intake: Start at 6 weeks; repeat every 2 - 3 weeks with the final one given between 16-17 weeks.

YOUNG ANIMALS (ages 4 mo to 5 years): Series of 2 vaccines, 2 - 3 weeks apart.

The above animals MUST have 2 vaccines prior to alter.

OLDER ADULTS (6+ years): Only 1 vaccine.

Possible Side Effects:

fever, lethargy, limping, minor cold symptoms (sneezing, nasal discharge) - notify Leadership if these appear.

CLINIC:

There are East Valley (most Tuesdays) and West Valley (varies) locations in AZ. Clinic should be used for testing, exams, rabies vaccines, and other instances where a professional opinion or assistance is needed. Core vaccines, microchips and fluids can all be given by other fosters in the rescue and do not need to be done at clinic (although they can be done if you're there for another reason already).

Get on the schedule early as it fills quickly.

TESTING:

Cats must be in quarantine for 30 days before being tested. No exceptions. All cats must be tested for FeLV. Cats over 6 months are also tested for FIV. Kittens should be at least 8 weeks old at testing. Dogs will be tested for heartworm upon intake. (Tests can be done at time of alter, only if absolutely necessary with Leadership approval. SOL test kit will need to be picked up for these exceptions.) Note results on Medical Tracking Form along with date and who did the test. (Record heartworm in FeLV space.)

RABIES VACCINE:

If your cat is at least 3 months old and may be going to PetSmart, be sure the Rabies vaccine is given BEFORE its 4 month birthday. All dogs get a Rabies vaccine between 3 and 4 months old.

Must be given by a veterinarian; ideally through clinic at the Café. Alternate arrangements can be made if clinic is not practical. Note date and veterinarian on Medical Tracking form.

MICROCHIP:

All animals will receive a microchip. Please attach the sticker to the Medical Tracking. The adopter will receive the number on their paperwork. The adopter is responsible for registration of the microchip. SOL is recorded in the chip registry database as an alternate owner before the adoption.

NAIL TRIM:

All animals must have their nails trimmed before going into Clinic or PetSmart. Ask your mentor to teach you if you're unsure of how to do it.

ALTERS:

Choose an alter appointment from the list available on the scheduling software. Review the information provided when you sign up. If you would like to carpool, you will need to arrange it yourself.

VETERINARY EXAM:

All animals require a veterinary exam. This can be done either at the time of alter or at a clinic appointment with April and/or Dr. Mulligan. Animals 8+ years of age need basic lab work. Lab work should be run through the SOL clinic whenever possible.

Please retain this sheet for use with all future foster animals. If protocols change, you will be notified.
